To Our Patrons, Greeting

Friends and Patrons: A Happy New Year to you all! Again at the dawn of a New Year we send greeting to our friends and patrons, together with our New Seed Book for 1919 of New and Reliable Seeds. We thank you all for very liberal orders given us in the past.

We greatly appreciate and want your orders. Plant Alneer's Reliable Seeds to be assured of large and bountiful crops. We have the finest and most select stock of seeds in the world, and sell them at prices that are right; no better seeds can be had at any price. We ask you to compare prices with others you may get, and by doing so you will find it to your advantage to buy from us; we save you money. Our motto is: **Best Seeds Only**. We have harvested a very fine crop this year of very best quality seeds and have placed prices very low for these fine seeds—come early and get your supply.

Thanking our friends and patrons for their kindness and liberal orders in the past, we solicit a continuance of the same. Send in your orders as early as possible, and induce your neighbors and friends to join their orders with yours, and all send for Alneer's Reliable High Grade Tested Seeds.

Yours very truly,
ALNEER BROTHERS.

Club Orders

On a Club Order amounting to \$3.00 in packets, 15 per cent cash discount. On a Club Order amounting to \$5 in packets, 20 per cent cash discount. On a Club Order amounting to \$10 in packets, 30 per cent cash discount. **Positively, these offers are for seeds in packets only.** Seeds by weight or measure, plants, bulbs or implements cannot be included in these club rates. With our low prices this makes the greatest offer in seeds ever made. Any one can, in a few hours among neighbors, make up a club.

Seeds Given Away, or Extras

Every year we distribute quantities of seed packets of choice and rare sorts. The larger the order the greater will be the number of extras thrown in as a rule, exceptions being made only when heavy bulk seeds are ordered, such as farm seeds.

Our Packets

We guarantee that our packets are large size and well filled with choice, fresh seeds. Our customers say that our packets are larger and better filled than most seedsmen's packets. We have no half size packets.

What We Warrant

We believe that the seeds we offer are excelled by none in the world, yet our practical experience of many years fully assures us of the fact that crops may fail no matter how fresh and pure the seeds sown to produce them may be. Therefore, while we exercise the greatest care to have all seeds pure and reliable, it is hereby mutually agreed between ourselves and the purchaser that we are not in any respect liable or responsible for the seed sold by us, or for any loss or damage arising from any failure thereof in any respect.

Our Prices

have been placed as low as possible for first quality and honest seeds, besides the many Extras we shall continue to freely throw in.

Seeds, Bulbs and Plants Free by Mail (Parcels Post)

All seeds, bulbs and plants are sent free by mail or express at prices quoted, to any part of the United States, unless otherwise specified, except seeds by the 1/2 bushel, 1/4 bushel and bushel, which are sent by express or freight at buyer's expense. In such instances we reserve the privilege of enclosing in the bags or packages such small packets as may be ordered, as it does not increase the transportation charges, and, in consideration of this, we will add enough extras to fully repay our customers for this kindness. Our Canadian customers will please add to catalogue price at the rate of 8c per pound for postage, as it costs 16c per pound to send seeds from the U. S. to Canada.

How to Send Money

The money must accompany the order, and can be sent safely by Postoffice Money Order, by Draft on New York or Chicago, by Registered Letter or by Express Company's Money Order. Please do not send individual checks, as it costs 25c to return to your bank to be cashed. We disclaim all responsibility when remittances are not made as above directed. Very small amounts may be sent in postage stamps.

Name and Address

Please remember to write your Name, Postoffice, County and State as distinctly as possible especially the name, also the nearest Express Office. We can ship by American, Adams and Wells-Fargo Express as desired.

116 Kishwaukee Street, Rockford, Illinois

To All Planters of Seeds:

We have made unusual preparations this year to overcome the delays of last season in filling orders. The delays were largely due to the slowness of the railroads and transportation conditions in general. Now that the war is over we hope to get stocks in on time, so that we can fill orders promptly and to customers' entire satisfaction. Most seed crops are quite good this year and quality of the very best. Shortage seems to be mostly in such sorts as cabbage, squash, pumpkin, and some sorts of peas and beans. We have made prices as low as possible in all instances for best seeds obtainable. Quality and again Quality is our watchword.

Pe-Tsai, Chinese or "Celery" Cabbage

Chinese or Celery Cabbage has attained great popularity in the last two years. One grower writes: "This fall there was a vegetable called Celery Cabbage sold on our market and people went crazy over it." Pe-Tsai produces beautifully crisp, celery-like heads that blanch easily and that resemble a giant Cos Lettuce. As a salad it rivals the finest lettuce, while cooked like cabbage or spinach it makes a delightful "greens." Early sowing is not recommended, as during hot weather it has a tendency to run to seed without heading. Sow seed, in any good soil, the first of August, making rows 24 to 36 inches apart and thinning to 15 inches apart in the row. Pe-Tsai will not stand frost. Pkt. 10c, oz. 40c, $\frac{1}{4}$ lb. \$1.20.

Good keeper and is truly "faultless" in every way. Pkt. 6c, oz. 45c, $\frac{1}{4}$ lb. \$1.50, $\frac{1}{2}$ lb. \$3.00, lb. \$6.00.

Alneer's Extra Early Columbia

SWEET CORN

Corn does best in moderately rich soil; do not plant before settled warm weather. The early more dwarf varieties should be planted 2 by 3 feet apart, the larger and later kinds 4 by 5 feet apart in hills, 4 to 6 seeds in a hill. Our packets are full size and large as usual.

Alneer's Extra Early Columbia. The above illustration, made true from nature, gives some idea of this grand new sugar corn. The Extra Early Columbia is an acquisition of rare value. This new and valuable variety of Sweet or Sugar Corn has eclipsed all other sorts. The Extra Early Columbia is as early as the Cory and nearly twice as large, being 12-rowed and of great length. The color is a beautiful creamy white. In quality, sweetness and flavor it is superior to any early sort known and is also a heavy yielder. Alneer's Extra Early Columbia corn is the best and largest early sweet corn ever offered. Price per pkt. 5c, $\frac{1}{2}$ pt. 15c, pt. 25c, qt. 45c, $\frac{1}{4}$ bu. \$1.10, $\frac{1}{2}$ bu. \$2.00, $\frac{1}{2}$ bu. \$3.75, bu. \$7.00.

The stalks grow from $3\frac{1}{2}$ to 4 feet in height and produce one or two good ears on each stalk. The ears are 5 to 6 inches in length; the grains, when ears are ready for use, are a bright golden yellow. The flavor is exceptionally rich and sugary, "the sweetest of all." The ears are large, with sixteen to twenty rows with very long grain which is of the very best quality. Pkt. 5c, ½ pt. 10c, pt. 18c, qt. 38c, ¼ bu. 90c, ½ bu. \$1.75, ¾ bu. \$3.35, bu. \$6.50.

NEW HONEY DEW MUSKMELON.

New Honey Dew. A wonderful new melon sold at fabulous prices in all leading markets. Honey Dew is a new type of muskmelon, and is the result of crossing the Rocky Ford with a South African melon. They grow about 6 inches in diameter from top to bottom and 7 or 8 inches long. The color is a dull white when ripe, having no netting. The rind, though thin, is very tough and so close that the excellent flesh is practically sealed up where it keeps in fine condition for several weeks after they are ripe. The flesh is a rich green color, very sweet and possesses a delightful flavor. The vines are more productive than the ordinary kinds and the muskmelons are superior shippers. Pkt. 5c, oz. 15c, $\frac{1}{4}$ lb. 45c, $\frac{1}{2}$ lb. 80c, lb. \$1.50.

Silver Netted Nutmeg. The illustration represents exactly the handsome, heavily silver netted appearance of this fine melon. The green flesh is very sweet and melting, while the melons are borne in abundance. Pkt. 5c, oz. 8c, $\frac{1}{4}$ lb. 25c, $\frac{1}{2}$ lb. 42c, lb. 80c.

KLECKLEY "SWEETS"

THE SWEETEST OF ALL MELONS

COLE'S EARLY

MELON---WATER Tom

Watson

"Kleckley's Sweets." Are the sweetest flavored watermelons grown. Oblong shape, dark green skin; bright red flesh, always solid and of the most luscious flavor imaginable. The only fault we discover is that the rind is too tender for the melons to ship well to distant markets, but for the home garden and local market no other melon can equal the "Kleckley Sweets." Pkt. 4c, oz. 8c, $\frac{1}{4}$ lb. 25c, $\frac{1}{2}$ lb. 40c, lb. 75c.

Cole's Early. Very hardy; a sure cropper for Northern states. The flesh is brilliant red in color, and remarkably solid. It is particularly firm and solid at the heart. The flavor is delicious, and the flesh is entirely stringless. The rind, though thin, is very tough, making an effective protection to the flesh, and insuring good shipping qualities. It is almost unrivalled in all respects for both home and market; and in many places not well adapted. The reason that this fine new watermelon received the name of International was because of its proven ability to flourish almost anywhere. Pkt. 5c, oz. 8c, $\frac{1}{4}$ lb. 20c, $\frac{1}{2}$ lb. 38c, lb. 70c.

Mammoth Gray Monarch. Attains a weight of 60 pounds and over. Outside skin of a mottled gray color; shape large; flesh bright crimson, sweet and delicious flavor. Pkt. 4c, oz. 7c, $\frac{1}{4}$ lb. 18c, $\frac{1}{2}$ lb. 35c, lb. 60c.

Cooper's Sparkler
The Market Gardeners' Favorite

Cooper's Sparkler. This type of Radish, having red skin with a white tip, has long been a great favorite, and with this variety the white portion extends much farther up than in the case with ordinary Scarlet Turnip White Tip Radish. The upper portion is a rich, brilliant red, showing in great contrast to the lower portion, which is pure white, and adding greatly to its attractive appearance. The general contour is turnip-shape, and size medium, very uniform, with flesh crisp, tender and sparkling. The rapidity of its growth recommends "New Sparkler" for growing in the greenhouse, but it is equally as valuable for sowing in the vegetable garden. Pkt. 5c, oz. 10c, $\frac{1}{4}$ lb. 30c, $\frac{1}{2}$ lb. 55c, lb. \$1.00.

Improved Long Scarlet Short Top or Cincinnati Market. Our strain of this very popular long radish is the finest to be had on the market. In it we have, without exception, the very best long brittle, brightest scarlet radish we are acquainted with. Our seed has for years been grown for us by the same French grower, who has bred it up until now it is simply the perfection of a long red radish, and much better than the ordinary strain offered. It matures beautiful radishes, which are always brittle and sweet, 25 to 30 days from the sowing of the seed. Shape well shown in illustration herewith. It is undoubtedly the standard long red variety that will withstand the hot dry weather and remain firm and crisp and of fine flavor. For either the market or home gardener. Pkt. 5c, oz. 10c, $\frac{1}{4}$ lb. 30c, $\frac{1}{2}$ lb. 55c, lb. \$1.00.

Sudan Grass

Sudan Grass. It was first introduced into the United States in 1909 from Sudan under the name of Garawi. Tests were made in all parts of the United States. As a result of the tests the Department of Agriculture reports that Sudan Grass will be of the greatest value in the western and southwestern states where the rainfall is deficient. The Department also reports that it will make just as good yields in most of the central and northern states, and will grow nearly everywhere. Sudan Grass is strictly an annual and dies each year like Millet. It belongs to the sorghum family. Is best sown broadcast or with a drill when it can be cut with a mower and treated like any other hay. It grows 3 to 5 feet high. Produces twice as much hay per acre as any of the common forage plants. Sow about corn planting time, after the ground becomes warm. 10 to 15 lbs. will seed an acre. From Central United States southward it is possible to have from 2 to 3 cuttings. From seeding to cutting 75 to 80 days are required. The second cutting comes on in about 45 days. The yields vary from 1 to 8 tons cured hay per acre. Sudan Grass, lb. 40c, prepaid; not prepaid, 5 lb. \$1.50, 10 lb. \$2.75, 25 lb. \$6.25, 50 lb. \$12.00.

Feterita. A new non-saccharine sorghum, maturing its crop 20 to 30 days earlier than Kafir Corn, making it well adapted to sections with short seasons. Feterita grows about 5 feet high, branching freely from the roots and producing numerous large heads of white grain. It is a remarkable drought resister, producing a crop when all other kinds of fodder fail. The grain is excellent for feeding chickens or any stock. The fodder is much finer than corn stalks, and is highly relished by all stock. For grain sow 5 pounds of seed per acre in hills or drills.

Feterita

For fodder, sow one-half bushel per acre, broadcast or in rows. Per lb. 30c, prepaid; not prepaid, 5 lb. 60c, 10 lb. \$1.00, 25 lb. \$2.00, 50 lb. \$3.75.

Sweet Clover or Bokhara
(White Blossom)

Sweet Clover Bokhara (White). For years considered valuable only for the excellent honey which it yielded, its importance as a soil builder and inoculator for Alfalfa, as a hay crop and as a pasture plant, and its adaptability to generally unfavorable soils and conditions not then being recognized. Now, however, large acreages in some sections are devoted to this crop, and its true value is better known. Stock do not take to it readily at first, but soon learn to like it and eat it greedily. Sow 20 lbs. per acre. Per lb. 45c, ¼ bu. \$4.50, bu. \$17.50.

ALFALFA

Alfalfa, or Lucerne. Alfalfa is being more generally grown as experience is teaching our farmers the proper methods to follow. Different soils do not now seem so difficult to overcome, especially when drained, pulverized, sweetened and inoculated. Alfalfa naturally prefers a deep, sandy or gravelly sub-soil. Roots from 3 to 15 feet deep and a good stand on properly selected land should yield from 3 to 5 cuttings a year. We make a specialty of extra high grade seed that tests 99 per cent pure or better. Treat your land to a liberal dressing of fine ground lime or more liberally to fine ground limestone well worked into the soil some three months to a year before seeding to alfalfa. Sow from 10 to 15 lbs. well inoculated seed per acre, using Nitratin. From April 1st to June 15th for the early Spring sowing, either drilled or sown broadcast. If broadcast, cover lightly with a light drag or with single stroke of a harrow. Many prefer sowing from July 15th to September 15th, when seeded late it gives the grower an opportunity to have his land clean and free from weeds. Lb. 35c, ¼ bu. \$3.90, bu. \$15.00.

DWARF ESSEX RAPE

A forage plant of great value, which can be sown at any time in May, June, or July; requires about 5 or 6 lbs. of seed per acre. Makes a grand pasturage for sheep, as well as for other stock. It can be cut up and shocked for winter feeding if permitted to grow to its full size. Is not injured by frost and will furnish feed until winter. 100 lbs. \$14.00, 50 lbs. \$7.25, 25 lbs. \$3.75, 10 lbs. \$1.65, not prepaid; by mail, per lb. 28c.

Universally recommended by the Experiment Stations of the northwestern states and by the U. S. Dept. of Agriculture. Prof. Shepard, of North Dakota Agricultural College, says: "The eagerness with which it is sought by stock leads me to believe that it is of as much value as timothy for pasture, and that the hay is as valuable, ton for ton." Japanese Millet, or "Billion Dollar Grass," as it is sometimes called, is of recent introduction, and great claims are made for it as to productiveness and value as a forage plant. Its introducers say of it that it is a marvelous grower and luxuriant stooler; and Prof. Brooks, of the Massachusetts Experiment Station is quoted as saying: "At our station it produced 60 bushels of seed, 11,297 pounds of straw, 36,000 pounds of green fodder, 12,000 pounds of hay per acre, being superior to good corn fodder in feeding for milk, and in combination with the soja bean makes a very superior ensilage. Recommended highly for feeding dairy cattle, young stock and sheep, being very rich in nutritious elements. If sown latter part of April will be ready to cut for hay by middle of July. Attains a height of from 5 to 7 $\frac{1}{2}$ feet, according to season." Coming with such high recommendations we feel it worthy of trial. Not prepaid, $\frac{1}{4}$ bu. 50c, $\frac{1}{2}$ bu. 85c, $\frac{1}{2}$ bu. \$1.60, bu. (36 lbs.) \$3.00.

GREAT JAPANESE WINEBERRY

This belongs to the Raspberry family, is a strong vigorous grower, attaining a height of 4 to 6 feet, and is perfectly hardy in all positions without protection. It stands alike the cold of northern winters and heat of southern summers without the slightest degree of injury. Its leaves are of the darkest green outside and silvery white underneath. The young shoots and branches are covered with reddish hair or moss which makes the plant odd and handsome.

The fruit is borne in large clusters, often 75 to 100 berries in a bunch. These berries are from the time of formation and bloom, until they ripen, enclosed in a "burr" which is formed by the calyx covering them entirely. When ripe the "burr" opens, exhibiting a large berry of the brightest, light, glossy scarlet or sherry wine color. The flavor of the fruit is entirely different from any other berry, being very sprightly, sweet and juicy, a delicate and luscious flavor peculiar to itself. It is free from all insect ravages.

For cooking in any form, canning or preserving there is nothing better. It also makes the most delicious jelly. Fruit commences to ripen early in July, and continues for a long time.

The vigorous growth, remarkable productiveness, immense size, handsome uniform shape, deep lustrous crimson color, and, above all, the rich, luscious flavor, combined with the delightful aroma, render "Great Ruby" peerless among strawberries. It commences to ripen soon after the early varieties, and bears until nearly all the others are gone. By mail, doz. 30c, 100 \$1.25; by express, doz. 25c, 100 90c, 1,000 \$6.00.

CORSICAN

Superb (Per.) This variety is by far the best of any of the fall bearing strawberries. In growers' opinions there has never been a variety introduced, either spring or fall bearing, that has as much vitality and fruit producing qualities as the Superb. It seems almost unbelievable that, after producing a crop of fruit the first fall after being planted, they will also bear as large a crop the following spring as any of the spring sorts; still such is absolutely the fact, and, besides, they will produce another good crop the following fall; however, this variety does its very best when grown in hills and runners kept cut. The Superb was originated by Mr. Samuel Cooper. The fruit of Superb is large, dark red, glossy, firm and of extra good quality. The plants are healthy growers and make runners freely. Mr. Cooper says that Superb is the finest berry of any kind that he has ever grown. Per doz. 50c, 100 \$3.00, postpaid.

St. Regis Everbearing

"EARLY TILL LATE."

Red raspberries from June until the killing frosts of autumn, as fine red raspberries as you have ever seen and good to heavy pickings from first to last; quality as good as Cuthbert, fruit so rich in sugar that it will stand shipment to the most distant markets, and the fact that they bear the first year planted, and you have the ideal in red raspberries. The St. Regis embodies all of these good qualities and is the only raspberry worthy of the name "EVERBEARING." Each 15c, doz. \$1.30, postpaid.

St. Regis RED Everbearing Raspberry

The fruit looks like a blackberry, being of the same shape, color and size. The quality is very good. When not quite ripe it is a little tart but when fully ripe is delicious indeed. The Himalaya will thrive and produce immense crops in any soil. It is certain that cold weather will not injure it, as it has withstood the coldest weather.

The vitality of the plant does not all go in making up its wonderful growth by any means, for the crop of fruit that they will produce is almost beyond belief. One party claims 1,042 crates per acre. Each 15c, doz. \$1.30, postpaid.

Giant Himalaya Berry

Himalaya is a wonder and in a class by itself. The Himalaya vine looks like a blackberry vine, the fruit tastes like a blackberry, still the plant has the nature of a tree or a grape in that the wood does not die down every year as with raspberries and blackberries, but continues to bear fruit right along year after year.

Commencing to ripen as the Himalaya does, about the first of August and continuing until October, you are sure to get a fancy price for your fruit, as there are no other berries on the market at that time.
